

CAUTION !**WET FLOOR**

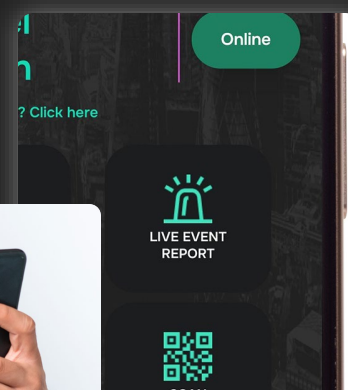

What you can't see can still impact operations.

Most security activity isn't an incident.

Patrol observations. Contractor access. Maintenance concerns. Tenant requests.

Yet in many organisations, this information is still recorded in paper occurrence books, spreadsheets or disconnected systems.

Kinexio's Digital Daily Occurrence Log gives security teams one central place to record, share and search operational activity in real time – creating visibility across buildings and teams.

Operational visibility is built one observation at a time.

The operational challenge

Daily occurrence logging rarely fails because teams aren't recording information. It fails because:

- ! Important updates are trapped in paper log books
- ! Information is lost between shifts
- ! Operational records are difficult to search
- ! Visibility is limited across multiple sites
- ! Managers lack a live view of site activity

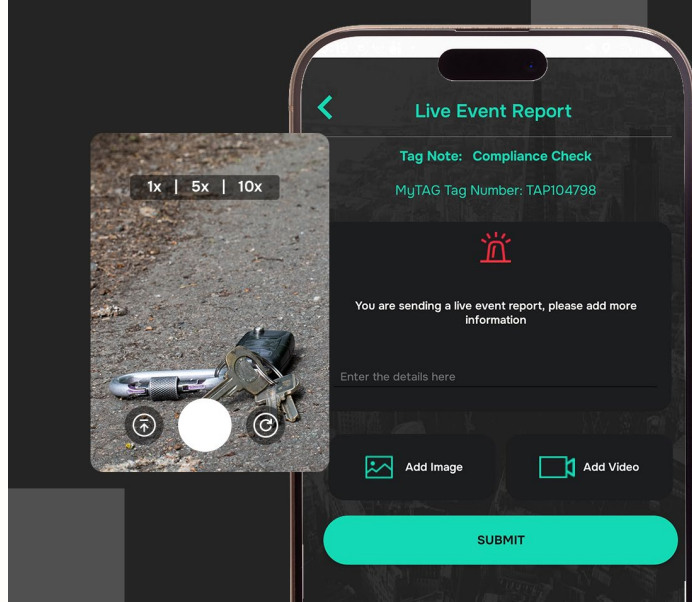

When operational information becomes fragmented, small issues become harder to spot.

And when visibility is reduced, operational confidence starts to break down.

From occurrence logging to operational intelligence

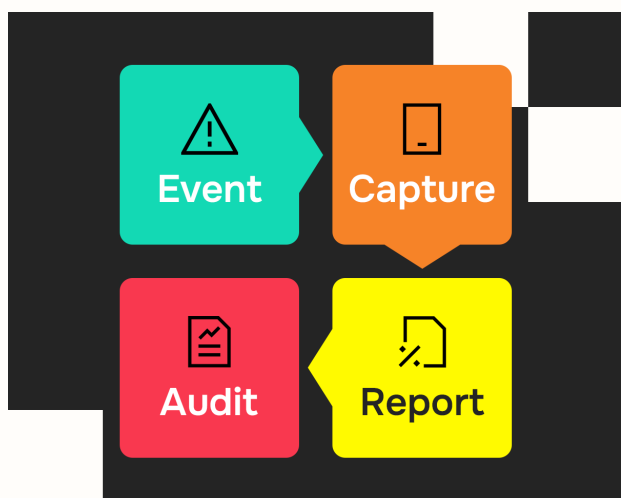

A Daily Occurrence Log helps organisations understand operational patterns, improve communication and strengthen accountability across teams and sites. By centralising occurrence data in one platform, organisations gain clearer visibility into:

- ✓ Recurring operational issues
- ✓ Frequently reported locations
- ✓ Maintenance trends
- ✓ Shift handover performance
- ✓ Portfolio-wide operational insights

Better visibility creates better operational control

Benefit	What it means for you
Real-time visibility	Monitor operational activity across sites and teams
Improved shift continuity	Reduce communication gaps between shifts
Searchable records	Find operational history instantly
Consistent reporting	Standardise occurrence logging across teams
Portfolio oversight	Gain visibility across multiple properties
Operational insight	Identify recurring issues and emerging trends

How it works (in plain English)

1. A security officer records an occurrence from mobile (live event) or reports back to GSOC
2. Notes, images and supporting information are captured instantly
3. The entry is categorised and stored automatically
4. Updates become visible to managers and colleagues immediately
5. Teams can search, review and reference historical records
6. Reporting and trends are available through a central dashboard

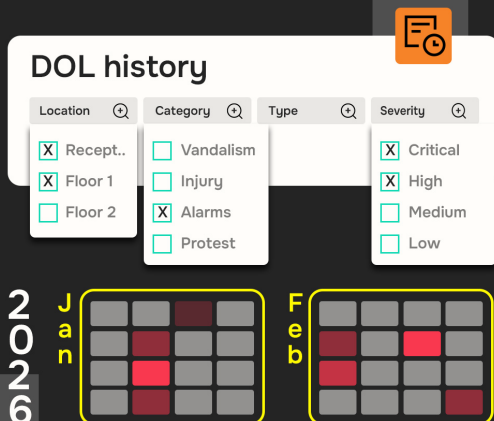

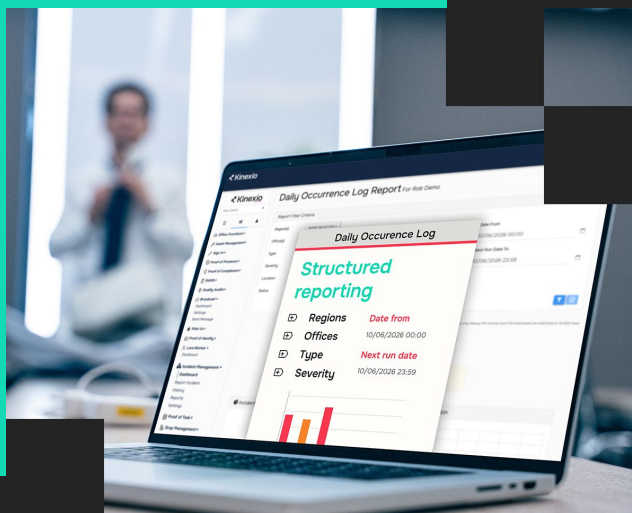

Everything is captured in the moment, not reconstructed later.

Structured occurrence reporting

Consistency matters.

Kinexio enables teams to categorise occurrence entries, attach supporting evidence and record operational activity using standardised reporting formats.

This improves reporting quality, creates cleaner records and makes information easier to find later.

Searchable operational history

Paper log books are difficult to search.

Kinexio creates a centralised, searchable operational record that allows users to quickly find historical activity, recurring issues and previous observations.

Instead of searching through weeks of paperwork, teams can access information in seconds.

Why Kinexio?

Kinexio provides one connected platform for:

- Proof of Presence
- Proof of Compliance
- Incident Management
- Patrol management
- Key & Asset Management

... and more!
